Problem Solving

Vocallabs.ai

AI voice agents automating business calls with human-like fluency

FEATURES

- AI voice agents for sales, support & booking — natural, unscripted flows
- Intelligent Call Flow Builder for customizable AI call scripts
- SDK, n8n node & Chrome extension for workflow automation
- Hybrid model: seamless AI ↔ live agent transitions
- Voice analytics: emotion, intent & tone beyond transcription

MOATS

- Full-stack ownership: design → execution → analytics
- India-first: tuned for local languages, accents & workflows
- Founder conviction: Joey Dash goes all-in post-Subspace
- Data flywheel: proprietary conversation intelligence at scale

Subspace.money

Subscribe to anything, delivered in minutes — Subscriptions · Sharing · Rentals

FEATURES

- Subscription mgmt, group finance, bill splitting & expense tracking
- Auto-detection & categorization of recurring payments via API
- Bill payments, digital subscriptions, gift cards — Android / iOS / Web
- 90%+ ops powered by autonomous AI agents
- India's first subscription marketplace for local providers

MOATS

- Bootstrapped & profitable — rare in consumer fintech
- Network effects: group sharing gets stickier with more users
- Negotiate API: automated price negotiation = hard to replicate
- AI-native ops: structurally lower costs at scale
- Rs.36.5 Cr ARR (FY25) with zero external funding

THE TASK

Pick **one** of the two companies. Deliver a **product teardown** — your **5 sharpest feedbacks** across the Product Pillars below. This is not a filter exercise; whoever joins *owns and executes* these from Day 1.

Use SWOT / 7Ps / Porter's Five Forces or any framework at your disposal.

Structure each feedback:

- (a) **Observed** What you actually saw in the app / website / flow
- (b) **Problem** Why it matters — the real user or business pain
- (c) **Ship instead** Your specific, actionable solution

HOW WE'LL EVALUATE

MOVES FORWARD	DOESN'T MOVE FORWARD
Real, non-obvious observation • Specific screens/copy/flows • Tradeoff thinking • Clear observation→problem→solution chain • Prioritisation logic	Generic feedback ("improve UX", "add gamification") • All 5 in one area • Features without an observed problem • Obvious signs the app wasn't used • Polished but shallow

We don't care about CV brand. We care whether you used the app, thought hard, and can communicate it clearly.

NEXT STEPS

- 1 Go through the Website and Apps — use it like a real customer.
- 2 Attach supporting docs, slides, screenshots, or walkthroughs in your report.
- 3 Feel free to use Gen AI tools — but keep your feedback authentic, research-backed, and make sure you distinguish yourself from other applicants.
- 4 **Deadline: Sunday, 31 May 2026, 11:59 PM IST**
